WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

One print: a 194 mm round plate 3 mm thick, a box wall 3 mm thick and 35 mm tall round its edge (188 mm inside), and the dome shape standing on the plate in the middle, crown up.

Dome shape: 150 mm across at the plate, 104 mm across the crown, 22 mm tall, 6 mm radius round the crown edge.

Print with the plate on the bed; 4 walls; 20 % infill is enough.

Sand the dome shape smooth (to 400 grit) and seal it with primer: the silicone copies every layer line onto the dome.

Seal the joint between plate and wall with a bead of hot glue.

Use: spray mould release, pour silicone to 10 mm over the crown (32 mm deep), let it cure, then pull the block out (step 1).

Check: the plate sits flat; no gap at the foot of the dome.
